

# Non-Stigmatizing Language in Substance Use Research

Choosing appropriate language to describe substance use and the population affected by substance use is critical to improving access to care for people who use drugs. Although several medical journals and government agencies continue to have words such as “addiction” and “abuse” in their title, [the editorial board of the Journal of Substance Abuse](#) acknowledges this as an artifact of the evolution of language surrounding substance use and hopes to encourage authors, reviewers and readers to engage with this changing language of addiction.

CHERISH recognizes that this is an area where practice continues to evolve. CHERISH encourages researchers, healthcare providers, and media professionals to join efforts to reduce negative stereotypes and biases surrounding people who use substances by using the following evidence-based language when writing or talking about substance use, treatment, and people who use drugs. Visit the [National Institutes of Health](#) and [National Institute on Drug Abuse](#) to read more about the importance of using non-stigmatizing language.

Recommended Terminologies	Definition	Words to Avoid or Replace
<b>Substance use disorder (SUD)</b> <b>Opioid use disorder (OUD)</b> <b>Drug use disorder (DUD)</b> <b>Heroin use disorder (HUD)</b> <b>Prescription opioid use disorder (POUD)</b>	Term to describe a constellation of impairments caused by repeated misuse of a substance.
